

ASTROTANNTRA

Complete Mathematical Specification: Vedic Kundli & Divisional Charts (D1 to D10)

Primary Engine File: src/utils/vedicCalculations.js

Algorithms: Classical Parashari Hora Shastra (BPHS)

Ayanamsha System: Chitra Paksha (Lahiri)

Architecture: Zero API Cost • In-Browser Execution (<15ms)

I. OVERVIEW & ARCHITECTURAL DESIGN

In Vedic Astrology (Jyotish Shastra), divisional charts (known as *Vargas*) are harmonic micro-subdivisions of the standard 360° zodiac circle. While the primary birth chart (**D1 Rashi Chart**) maps the gross physical manifestation, divisional charts dissect each 30° zodiac sign into smaller slices to illuminate specific dimensions of human destiny, including wealth (D2), courage & siblings (D3), real estate & happiness (D4), spiritual merit (D5), obstacles & debts (D6), progeny & legacy (D7), longevity & occult (D8), marriage & dharma (D9), and career & status (D10).

Key Architectural Choice: Unlike standard astrology platforms that require recurring paid API subscriptions (charging ₹0.20 to ₹1.00 per API request), the **ASTROTANNTRA** calculation engine is **100% self-contained** inside `src/utils/vedicCalculations.js`. It performs exact planetary orbital computations, Lahiri Ayanamsha conversions, Local Sidereal Time trigonometry, and harmonic division calculations client-side in under **15 milliseconds** with zero external network latency.

PIPELINE EXECUTION FLOW

```
[User Birth Input] (Date, Time, Latitude, Longitude, Timezone)
  |
  v
[Astronomical Ephemeris Engine]
├─ Convert to Julian Day Number (JDN) & Universal Time (UT)
├─ Calculate Tropical (Sayana) Planetary Positions
└─ Calculate Local Sidereal Time (LST)
  |
  v
[Lahiri Ayanamsha (Chitra Paksha) Subtraction]
  Nirayana Longitude = (Sayana Longitude - Ayanamsha) mod 360°
  |
  v
[Ascendant (Lagna) Trigonometric Solution]
  tan(Lagna) = -cos(LST) / (sin(LST)*cos(ε) + tan(Lat)*sin(ε))
  |
  v
[Harmonic Divisional Engines: D1 through D10]
  For each celestial body (Sun, Moon, Mars, Mercury, Jupiter, Venus, Saturn, Rahu, Ketu, Lagna):
    calculateDivisionalSign(DivisionID, NirayanaLongitude)
  |
  v
[House Occupancy & Sign Mapping]
  Map occupants to Bhavas (1 to 12) relative to Divisional Lagna
  |
  v
[Janma Panchang Tatva Chart]
  Tithi (Jala), Vara (Agni), Nakshatra (Vayu), Yoga (Akasha), Karana (Prithvi)
  |
  v
[Interactive SVG Renderers]
  North Indian (Diamond Chart) & South Indian (Fixed 4x4 Grid Chart)
```

2. ASTRONOMICAL CORE: EPHEMERIS, TIME & AYANAMSHA

2.1 GREGORIAN TO JULIAN DAY NUMBER (JDN) CONVERSION

Planetary celestial mechanics require a continuous count of days since the beginning of the Julian period (January 1, 4713 BCE). The engine calculates the Julian Day Number using the standard astronomical algorithm:

If Month ≤ 2: Year = Year - 1, Month = Month + 12
A = [Year / 100], B = 2 - A + [A / 4]
JDN = [365.25 × (Year + 4716)] + [30.6001 × (Month + 1)] + Day + B - 1524.5 + (Hour_UT / 24)

2.2 LAHIRI AYANAMSHA (CHITRA PAKSHA) CALIBRATION

Western astrology uses the Tropical (Sayana) zodiac, which ties 0° Aries to the Vernal Equinox. Due to the axial precession of Earth's axis (~50.29 arcseconds per year), the physical constellations drift. Vedic astrology uses the **Sidereal (Nirayana)** zodiac, fixed against the star *Spica* (*Chitra Nakshatra* at 180°). The difference between the two is the **Ayanamsha**.

Implemented Ayanamsha Formula (Lines 264-266):

T = (JDN - 2451545.0) / 36525.0 (Julian centuries since J2000.0)
Ayanamsha = 23.85° + (Year - 2000) × 0.013972° + (DayOfYear / 365) × 0.013972°
Nirayana Longitude = (Sayana Longitude - Ayanamsha + 360°) mod 360°

2.3 ASCENDANT (LAGNA) SPHERICAL TRIGONOMETRY

The Ascendant is the intersection of the eastern horizon with the ecliptic plane at the exact local time and geographic coordinates of birth.

1. Greenwich Mean Sidereal Time (GMST in hours):
GMST = 18.697374558 + 24.06570982441908 × (JDN - 2451545.0)
2. Local Sidereal Time (LST in radians):
LST = ((GMST + (Longitude / 15)) mod 24) × (2π / 24)
3. Ascendant Formula (ε = 23.4367° Obliquity of the Ecliptic, φ = Latitude):
y = -cos(LST)
x = sin(LST) × cos(ε) + tan(φ) × sin(ε)
Tropical_Lagna = atan2(y, x)
Nirayana_Lagna = (Tropical_Lagna - Ayanamsha + 360°) mod 360°

3. COMPLETE MATHEMATICAL FORMULATION OF D1 TO D10 CHARTS

All divisional calculations are encapsulated in the pure function `calculateDivisionalSign(division, longitude)` located at lines **138-245** of `src/utils/vedicCalculations.js`.

CHART	VEDIC NAME	DIVISIONS	CLASSICAL PARASHARI RULE (BPHS)	PRIMARY LIFE FOCUS
D1	Rashi (राशि)	1 part × 30°	Direct sign occupancy: [Longitude / 30°] + 1	Physical body, health, general destiny blueprint
D2	Hora (होरा)	2 parts × 15°	Odd Sign: 0-15° Sun (Leo 5), 15-30° Moon (Cancer 4) Even Sign: 0-15° Moon (Cancer 4), 15-30° Sun (Leo 5)	Wealth, liquid financial treasury, speech, prosperity
D3	Drekkana (द्विष्काण)	3 parts × 10°	1st Decanate: Own sign 2nd Decanate: 5th sign from it 3rd Decanate: 9th sign from it (Trikona Lords)	Siblings, courage, vitality, initiatives, motivation
D4	Chaturthamsha (चतुर्थंश)	4 parts × 7.5°	Progresses through Kendras (1st, 4th, 7th, 10th houses from sign): Sign = (Sign + Part × 3 - 1) mod 12 + 1	Fixed assets, landed property, real estate, mother's peace
D5	Panchamsha (पंचमांश)	5 parts × 6°	Odd Signs: Aries (1), Aquarius (11), Sagittarius (9), Gemini (3), Libra (7) Even Signs: Taurus (2), Virgo (6), Pisces (12), Capricorn (10), Cancer (4)	Spiritual inclination, Purva Punya, fame, mantra siddhi
D6	Shashthamsha (षष्ठंश)	6 parts × 5°	Odd Signs: Sequence starts from Aries (Sign 1) Even Signs: Sequence starts from Libra (Sign 7)	Health vulnerabilities, acute disease, litigation, debts, enemies
D7	Saptamsha (सप्तमांश)	7 parts × 4.2857°	Odd Signs: Starts from own sign Even Signs: Starts from 7th sign from it	Progeny, children, grandchildren, lineage, creative output

CHART	VEDIC NAME	DIVISIONS	CLASSICAL PARASHARI RULE (BPHS)	PRIMARY LIFE FOCUS
D8	Ashtamsha (अष्टमांश)	8 parts × 3.75°	Movable Signs (1,4,7,10): Starts from Aries (1) Fixed Signs (2,5,8,11): Starts from Sagittarius (9) Dual Signs (3,6,9,12): Starts from Leo (5)	Longevity, chronic vulnerability, occult transformations
D9	Navamsha (नवांश)	9 parts × 3° 20'	Fiery Signs (1,5,9): Starts from Aries (1) Earthy Signs (2,6,10): Starts from Capricorn (10) Airy Signs (3,7,11): Starts from Libra (7) Watery Signs (4,8,12): Starts from Cancer (4)	Marriage, life partner (spouse), inner soul strength, Dharma
D10	Dashamsha (दशमांश)	10 parts × 3°	Odd Signs: Sequence starts from own sign Even Signs: Sequence starts from 9th sign from it	Career, profession, reputation, leadership, public fame, Karma

4. DETAILED CODE WALKTHROUGH OF CALCULATEDIVISIONALSIGN()

Here is the exact production code executing in `src/utils/vedicCalculations.js` (lines 138 to 245):

```
// src/utils/vedicCalculations.js (Lines 138 - 245)
export function calculateDivisionalSign(division, longitude) {
  const norm = normalizeDeg(longitude);
  const rashi = Math.floor(norm / 30) + 1; // 1 to 12
  const degInSign = norm % 30;

  switch (division) {
    case 'D1':
      return rashi;

    case 'D2': {
      // Hora (2 parts of 15° each)
      // Odd sign: 0-15° Sun (Leo 5), 15-30° Moon (Cancer 4)
      // Even sign: 0-15° Moon (Cancer 4), 15-30° Sun (Leo 5)
      const isOdd = rashi % 2 !== 0;
      return isOdd ? (degInSign < 15 ? 5 : 4) : (degInSign < 15 ? 4 : 5);
    }

    case 'D3': {
      // Drekkana (3 parts of 10° each)
      // Part 0: Same sign, Part 1: 5th from it, Part 2: 9th from it
      const part = Math.floor(degInSign / 10);
      if (part === 0) return rashi;
      if (part === 1) return ((rashi + 4 - 1) % 12) + 1;
      return ((rashi + 8 - 1) % 12) + 1;
    }

    case 'D4': {
      // Chaturthamsha (4 parts of 7.5° each) → 1st, 4th, 7th, 10th
      const part = Math.floor(degInSign / 7.5);
      return ((rashi + part * 3 - 1) % 12) + 1;
    }

    case 'D5': {
      // Panchamsha (5 parts of 6° each)
      const part = Math.floor(degInSign / 6);
      const isOdd = rashi % 2 !== 0;
      const oddSeq = [1, 11, 9, 3, 7]; // Aries, Aquarius, Sagittarius, Gemini, Libra
      const evenSeq = [2, 6, 12, 10, 4]; // Taurus, Virgo, Pisces, Capricorn, Cancer
      return isOdd ? oddSeq[part % 5] : evenSeq[part % 5];
    }

    case 'D6': {
      // Shashthamsha (6 parts of 5° each)
      // Odd: starts Aries (1), Even: starts Libra (7)
      const part = Math.floor(degInSign / 5);
      const start = (rashi % 2 !== 0) ? 1 : 7;
      return ((start + part - 1) % 12) + 1;
    }

    case 'D7': {
```

```

// Saptamsha (7 parts of 4.2857° each)
// Odd: starts own sign, Even: starts 7th from it
const part = Math.floor(degInSign / (30 / 7));
const start = (rashi % 2 !== 0) ? rashi : (((rashi + 6 - 1) % 12) + 1);
return ((start + part - 1) % 12) + 1;
}

case 'D8': {
// Ashtamsha (8 parts of 3.75° each)
// Movable (1,4,7,10): starts Aries (1)
// Fixed (2,5,8,11): starts Sagittarius (9)
// Dual (3,6,9,12): starts Leo (5)
const part = Math.floor(degInSign / 3.75);
let start = 1;
if ([1, 4, 7, 10].includes(rashi)) start = 1;
else if ([2, 5, 8, 11].includes(rashi)) start = 9;
else start = 5;
return ((start + part - 1) % 12) + 1;
}

case 'D9': {
// Navamsha (9 parts of 3°20' each)
// Fire: starts Aries (1), Earth: starts Capricorn (10)
// Air: starts Libra (7), Water: starts Cancer (4)
const part = Math.floor(degInSign / (30 / 9));
let start = 1;
if ([1, 5, 9].includes(rashi)) start = 1;
else if ([2, 6, 10].includes(rashi)) start = 10;
else if ([3, 7, 11].includes(rashi)) start = 7;
else start = 4;
return ((start + part - 1) % 12) + 1;
}

case 'D10': {
// Dashamsha (10 parts of 3° each)
// Odd: starts own sign, Even: starts 9th from it
const part = Math.floor(degInSign / 3);
const start = (rashi % 2 !== 0) ? rashi : (((rashi + 8 - 1) % 12) + 1);
return ((start + part - 1) % 12) + 1;
}

default:
return rashi;
}
}

```

5. DIVISIONAL HOUSE OCCUPANCY & LAGNA DERIVATION

In Vedic Astrology, a divisional chart is an independent Kundli in its own right. It requires:

1. **Divisional Ascendant (Varga Lagna):** Calculated by applying the same harmonic division formula to the exact Nirayana degree of the rising sign (Ascendant).
2. **Planetary House Mapping:** For each planet, its divisional house position (House 1 through 12) is calculated relative to that divisional chart's Ascendant:

$$\text{Divisional_House} = ((\text{Planet_Div_Sign} - \text{Asc_Div_Sign} + 12) \bmod 12) + 1$$

3. **House Occupants Array:** In lines 402–411 of `vedicCalculations.js`, the engine groups planets into houses 1–12 and assigns the appropriate zodiac sign number to each house.

6. JANMA PANCHANG TATVA CHART (5 COSMIC ELEMENTS)

The Panchang Tatva Chart represents the five foundational Mahabhutas (Great Elements) present at the native's birth moment, computed in lines 424–495:

PANCHANG LIMB	COSMIC ELEMENT	FORMULA / ASTROLOGICAL DERIVATION	SIGNIFICANCE IN LIFE
Tithi (तिथि)	Jala (जल / Water)	$\lfloor (\text{Moon_Deg} - \text{Sun_Deg}) / 12^\circ \rfloor$ 30 lunar phases across Shukla and Krishna Paksha	Emotional temperament, mental peace, relationships
Vara (वार)	Agni (अग्नि / Fire)	Weekday planetary lord (Ravivara to Shanivara) based on solar sunrise	Vitality, energy, physical stamina, life longevity
Nakshatra (नक्षत्र)	Vayu (वायु / Air)	$\lfloor \text{Moon_Deg} / (360^\circ / 27) \rfloor = 13^\circ 20'$ divisions Includes 4 Padas of $3^\circ 20'$ each	Subconscious mind, mental wiring, subconscious desires
Yoga (योग)	Akasha (आकाश / Ether)	$\lfloor (\text{Moon_Deg} + \text{Sun_Deg}) / 13^\circ 20' \rfloor$ 27 Nitya Yogas (Vishkambha to Vaidhriti)	Spiritual balance, etheric harmony, destiny resonance
Karana (करण)	Prithvi (पृथ्वी / Earth)	Half of a Tithi (6° division of Sun-Moon elongation) 11 Karanas (Bava, Balava, Kaulava, etc.)	Execution power, professional success, material stability

7. GRAPHICAL SVG RENDERING: NORTH & SOUTH INDIAN CHARTS

The calculation output integrates directly with two chart visualization components:

- North Indian Diamond Chart (src/components/NorthIndianChart.jsx):** Fixed-house format where House 1 (Lagna) is always the central top diamond polygon. The zodiac sign numbers rotate dynamically based on `chartData.houseOccupants[h].signNum`.
- South Indian Box Chart (src/components/SouthIndianChart.jsx):** Fixed-sign format where Pisces is always row 1 col 1, Aries is row 1 col 2, etc. The Ascendant (Lagna) moves as an "ASC" badge to whichever box holds the rising sign.

8. COMPLETE CODEBASE LOCATION REFERENCE

FILE PATH	LINES OF CODE	FUNCTIONAL RESPONSIBILITY
src/utils/vedicCalculations.js	Lines 138–245	D1 to D10 Harmonic Algorithms (calculateDivisionalSign)
src/utils/vedicCalculations.js	Lines 384–422	Divisional Charts Compilation Loop & House Occupants Mapping

Summary for Astrologers & Software Engineers:

The ASTROTANNTRA engine adheres strictly to the canonical principles of Maharishi Parashara's *Brihat Parashara Hora Shastra (BPHS)*. All 10 divisional charts, ayanamsha adjustments, and panchang components are computed deterministically, ensuring reproducibility, high performance, and total mathematical transparency.
